

Appl. No. 10/668,172  
Amendment dated: February 9, 2005  
Reply to OA of: January 11, 2005

This listing of claims will replace all prior versions and listings of claims in the application.

**Listing of Claims:**

1(currently amended). A composite micro-structured sheet for diffusing and condensing light comprising a substrate having a top surface and a bottom surface, wherein a plurality of straight trenches with an arc cross-section ~~or a micro-lens array~~ is formed on the bottom surface for diffusing the incident light on the bottom surface, and a plurality of rhombus protrusions is formed on the top surface for raising the semi-brightness angle of the light that has passed through the bottom surface.

2(original). The composite micro-structured sheet as claimed in claim 1, wherein the substrate is made of polymethyl methacrylate (PMMA) or polycarbonate (PC).

3(original). The composite micro-structured sheet as claimed in claim 1, wherein each straight trench with an arc cross-section is constructed of a convex pillar lens array or a concave pillar lens array.

Claim 4(canceled).

5(original). The composite micro-structured sheet as claimed in claim 3, wherein the size and focal length of the lenses of the convex pillar lens array or the concave pillar lens array are all the same.

Claim 6(canceled).

7(original). The composite micro-structured sheet as claimed in claim 1, wherein the rhombus protrusions are parallel to each other.

Appl. No. 10/668,172

Reply to OA of: January 11, 2005

8(original). The composite micro-structured sheet as claimed in claim 1, wherein an included angle between each straight trench with an arc cross-section and the respective rhombus protrusion ranges from 0 to 90 degrees.
